BUSINESS OVERVIEW

Commercial Snow Management & Property Maintenance | ON, Canada

Listing ID: 3746

COMPANY PROFILE

A high-growth, contract based commercial snow and ice management platform is available for acquisition. The business services mission-critical industrial and institutional sites across core GTA corridors under recurring 1–3-year agreements with strong renewal behaviour, driving highly predictable seasonal cash flow and attractive margin performance.

Operations are fully self-performed through an owned fleet, disciplined route density, and technology-enabled dispatch and compliance systems. The platform has been institutionalized with standardized SOPs and an embedded leadership team, resulting in minimal owner dependency and strong execution during peak winter demand.

The company has expanded into year-round property services to increase customer retention and reduce seasonality, with additional upside through route densification, larger multi-site mandates, expanded service penetration across existing accounts, and selective consolidation in a fragmented market.

This opportunity is well suited for strategic operators, facility services providers, private equity investors, or family offices seeking a defensible platform within a fragmented and essential infrastructure services sector. The founder is pursuing new ventures and is committed to a structured transition, including hands-on support post-closing and availability for advisory involvement to ensure continuity of client relationships and operational stability. Listing ID: 3746

REASON FOR DIVESTITURE

The founder is pursuing a new venture and is committed to a structured transition, including training and a non-compete.

INVESTMENT HIGHLIGHTS

Contracted, Recurring Revenue Base

The business operates under 1–3-year commercial contracts with strong renewal behaviour, delivering predictable, year-round revenue and strong cash flow.

Exceptional Growth and Margin Profile

The platform has achieved rapid top-line expansion and above-market EBITDA margins, driven by route density, fleet efficiency, and disciplined cost controls.

Operationally Mature, Scalable Platform

Centralized dispatch, advanced fleet technology, standardized SOPs, and compliance-driven operations support consistent execution at scale.

Self-Performing Operating Model

A dedicated, self-performing snow and ice management platform drives quality control and margin strength through a specialized winter-first approach. Summer maintenance is selectively provided to existing winter clients to support retention and reduce seasonality.

Favourable Industry Dynamics

Rising insurance costs, provincial legislation, and CapEx requirements are forcing smaller operators out of the market, creating consolidation opportunities for scaled, professional platforms.
