2. Real Time Transactions Info

As and when the Bookings & Cancellations happen on the live system we will be sharing those details to the respective vendor based on the push mechanism. For this, we need to have the endpoint URL from the Vendor so that we can able to push the information based on the below format.

Added Configuration in the system side to handle booking and cancellation transaction info i'e **Booking Callback Configuration.**

Request URL: **POST** `/transaction_callback.json?api_key=<API_KEY>`

Response :

Booking Case: **Checkbox: Bookings**

```
     {
        "requestType":"BOOKING",
